OVERVIEW

When it comes to all-around great General Aviation aircraft, Piper is a universally-recognized brand. The Piper PA-32, more commonly known as the Cherokee Six, is the natural successor to the PA-28 and is Piper's entry into the six-seat light utility market.

The assembly line for the PA-32 ran from 1965 through 2007 with nearly 8,000 airframes delivered to customers during its production run. With build numbers that high, the PA-32 is ubiquitous at airports across the country. While its most common use is in General Aviation operations, the PA-32 is also suited for air taxi and even aeromedical evacuation missions.

The PA-32-301 is the first PA-32 to bear the Saratoga moniker. Featuring an upgraded Lycoming IO-540-K1G5 engine, the Saratoga boasts an impressive 300hp engine, delivering more power in every flight. The Saratoga is a stable flyer, great for new pilots looking to sharpen their skills, or for seasoned pilots to continue to build their hours. With a solid cruise speed and manageable stall characteristics, the Saratoga is an all-around performer.
